### Notes on columns of Table:

Column	Notes
Sketch	Sketch is the number of the Lancia C. Servizio Assistenza Technica data sheet, which were issued between 1946 & 1970. No suffix the number means the Sketch is written in Italian; I means in English. Some Sketches were much modified (see below) & were re-issued with a new date although sometimes the modification numbers continued through this change. Where there is a re-dating I have made 2 entries distinguished by a suffix a, b etc
Title	As printed on the Sketch with notes on any signifiant changes
Model application	A fairly broad indication of the models to which the Sketch applies
Dates	The date in the title of the Sketch but re-arranged as Year/Month/Day to aid sorting on the computer. The were publised in the Day/Month/Year format & this is used elsewhere in this table
Pages	Pp is the number of pages of the original Sketch. For some Sketches it will say 1 then 2 for example where the Sketch has been enlarged
Model	This is a field denoting the Lancia model group to which the Sketch applies. It is to enable sorting from the master table containing all Lancia AST Sketches into Model Sketch lists. The codes used are in the table below
Notes	This indicates the modifications with their dates & othe information of interest. The dates are in Day/Month/Year format & the modifications are listed for each page of the Sketch. I have only been able to list those modifications I know about from the collection I have & from some other Lancia information I have. Reference is made to various personal collections: NT = Nigel Trow; KH = Kenneth Hillier; YB = Yale Braunstein Entries marked in this colour have been remade by Paul Mayo with original available Entries marked in this colour are Sketches found in various lists but which I don't have
